Our Beliefs

- Only when the owners of a boat building company actively use the product can you truly develop a world class boat.
- Sound engineering principles will define our product in all aspects.
- There is no higher priority than Total Customer Satisfaction.
- Direct interaction with our dealers and customers is a requirement for success.
- Involving our customers, dealers, employees, and suppliers in the use and design of our product will lead us to long term success.
- Excellence in innovative processes and materials.

Customer Testimonials

“As avid boaters, we spend every chance we can get on our boat. We love the functionality and special features our Crevalle offers, as we fish both inshore and offshore. It’s roomy enough for our whole family and provides the driest ride we’ve ever had in a boat. We are Crevallions for life!” -Michelle G

“Love the security of the deeper sides while being in open water and still having the ability to run in shallow water.” -Nathan R

About Us

Founded in 2013, the founders and ownership, saw an open market for a high-quality boat, engineered from inception, to be a true family friendly fishing boat. All Crevalle Boats operate extremely well in a multitude of scenarios. We put hundreds of hours on Crevalle's each year diving for lobster, snorkeling for scallops, battling sailfish, trolling weed lines for Mahi, bottom fishing for grouper, pulling the kids on wakeboards or tubes and kicking back on the sandbar. All done with the functionality of our crossover or hybrid style boat. Not only are our boats versatile in shallow water and offshore fishing, but we do it with style and comfort unlike any other. We strive to be a pioneer of innovation, while also not forgetting the important fundamentals of superior quality and customer service.
